

ABSTRACT

A scanning device including a housing, a scanning component at least partially received in the housing for optically scanning a document and providing an electronic version of the document, and a preview screen cooperatively coupled with the housing. The preview screen is coupled to the scanning component such that the electronic version of the document can be visually displayed on the preview screen to provide a preview of the document. The scanning device further includes an interactive component cooperatively coupled with the housing which can receive user input based upon the preview of the document.
